

July 2025 CSE 220
Online on Convolution
Subsections: B1, B2
Total Marks: 10
Total Time: 30 Minutes

January 28, 2026

In this online, you need to use your implementation of Signal and LTI to calculate the output for a combination of LTI systems. Below is the pictorial representation of the combination:

Tasks

- Determine and plot the output of the combined system by separately applying h_1 , h_2 and h_3 .
- Calculate h_{combined} (impulse response of a LTI that is equivalent to the whole system in the first figure), then determine and plot the output applying it.
- Verify that the both outputs you determined are the same signal.

Submission

Rename your python file as [2205xxx.py](#) and submit in the moodle.
